

EduGenie – Non Functional Requirements

Project: EduGenie – Google Gemini Powered Learning Assistant

1. Introduction

Non-functional requirements describe the quality, performance, security, and usability characteristics that the EduGenie system should provide.

2. Non Functional Requirements

2.1 Usability

The system should provide a simple and user-friendly interface so that students can easily use the available learning features.

2.2 Performance

The system should process user requests and display results within a reasonable time, depending on the response time of the AI service.

2.3 Reliability

The system should handle common input and API errors properly without causing the application to crash.

2.4 Maintainability

The application should use separate modules for major learning functions so that the code can be easily maintained and updated.

2.5 Scalability

The system should allow additional learning features and modules to be added in the future.

2.6 Accessibility

The application should be accessible through a standard modern web browser with clear and readable content.

2.7 Security

The Gemini API key and other sensitive configuration information should be stored securely and should not be exposed in the public source code.

2.8 Compatibility

The application should work with supported Python environments and modern web browsers such as Google Chrome, Microsoft Edge, and Mozilla Firefox.

3. Conclusion

These non-functional requirements define the quality and operational characteristics required for EduGenie to provide a reliable, usable, secure, and maintainable learning experience.
