

1. Introduction

The EduGenie - Google Gemini Powered Learning Assistant is tested to ensure that its major features work correctly and provide meaningful results to students.

2. Testing Objectives

- Verify that the application functions correctly.
- Verify that user inputs are processed properly.
- Check the Question and Answer feature.
- Check the Simplified Explanation feature.
- Check the Quiz Generation feature.
- Check the Text Summarization feature.
- Check the Learning Path Recommendation feature.
- Identify errors and unexpected behavior.

3. Features to be Tested

Feature	Testing Purpose
Question and Answer	Check whether EduGenie provides relevant answers
Simplified Explanation	Check whether complex topics are explained simply
Quiz Generation	Check whether quizzes are generated correctly
Text Summarization	Check whether long text is summarized
Learning Path	Check whether learning recommendations are generated

4. Testing Method

Functional testing will be performed by providing different inputs to each feature and checking whether the expected output is produced.

5. Expected Result

Each feature should accept valid user input and provide an appropriate response without application errors.

6. Conclusion

The test plan provides a structured approach for checking the functionality and reliability of the EduGenie application.
