

EduGenie – Frontend Development

Project: EduGenie – Google Gemini Powered Learning Assistant

1. Introduction

The EduGenie frontend provides the user interface through which students interact with the AI learning assistant.

2. Frontend Technologies

The frontend is developed using:

- HTML
- CSS
- Jinja2 templates

3. Main Frontend File

index.html

The `index.html` file provides the main user interface. It allows students to select a learning task, enter their input, submit the request, and view the generated response.

4. User Interface Components

The main interface contains:

4.1 Application Title

Displays the EduGenie application name and purpose.

4.2 Task Selection

Allows the student to select the required learning function:

- Explain
- Q&A
- Quiz

- Summary
- Recommend Path

4.3 Input Area

Provides a text area where students can enter a question, topic, or educational passage.

4.4 Submit Button

Allows the student to send the request for processing.

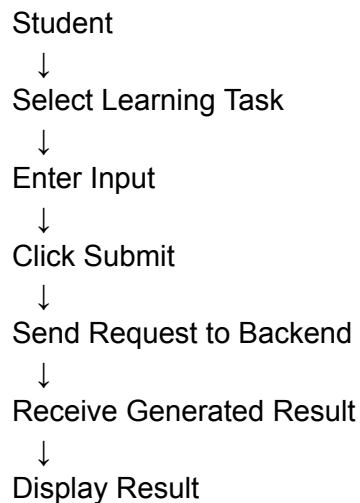

4.5 Result Area

Displays the response generated by the EduGenie system.

5. Styling

The `style.css` file is used to control the appearance of the web interface, including layout, text, spacing, buttons, input areas, and result display.

6. Frontend Workflow

7. Conclusion

The EduGenie frontend provides a simple interface that allows students to access the different AI-powered learning features through a web browser.
