

PROJECT TEST - DEMO SCREENSHOTS

EXPLAINING THE TOPICS :

CREATING QUESTION AND ANSWERS FOR THE TOPICS :

The screenshot displays the EduGenie web application interface. At the top, the browser tabs show 'EduGenie - Learning Assistant' and 'PROJECT TEST - DEMO SCREEN'. The address bar indicates the URL '127.0.0.1:8000'. The application header includes the 'EduGenie' logo and the tagline 'Google Gemini Powered Learning Assistant'.

The main content area features a 'Choose a feature:' dropdown menu with 'Q&A' selected. Below this is a text input field labeled 'Enter your topic or question:' containing the text 'what is python?'. A 'Submit' button is positioned below the input field.

The response area displays the following text:

****Python**** is a popular computer programming language.

Think of it as a set of instructions that you give to a computer to tell it what to do.

Here are three main reasons why Python is so popular:

1. ****It is easy to read and write:**** Unlike some programming languages that look like complex math equations or gibberish, Python looks a lot like plain English. This makes it great for beginners.

The bottom portion of the screenshot shows a continuation of the answer, including a bulleted list of Python's uses and a concluding statement.

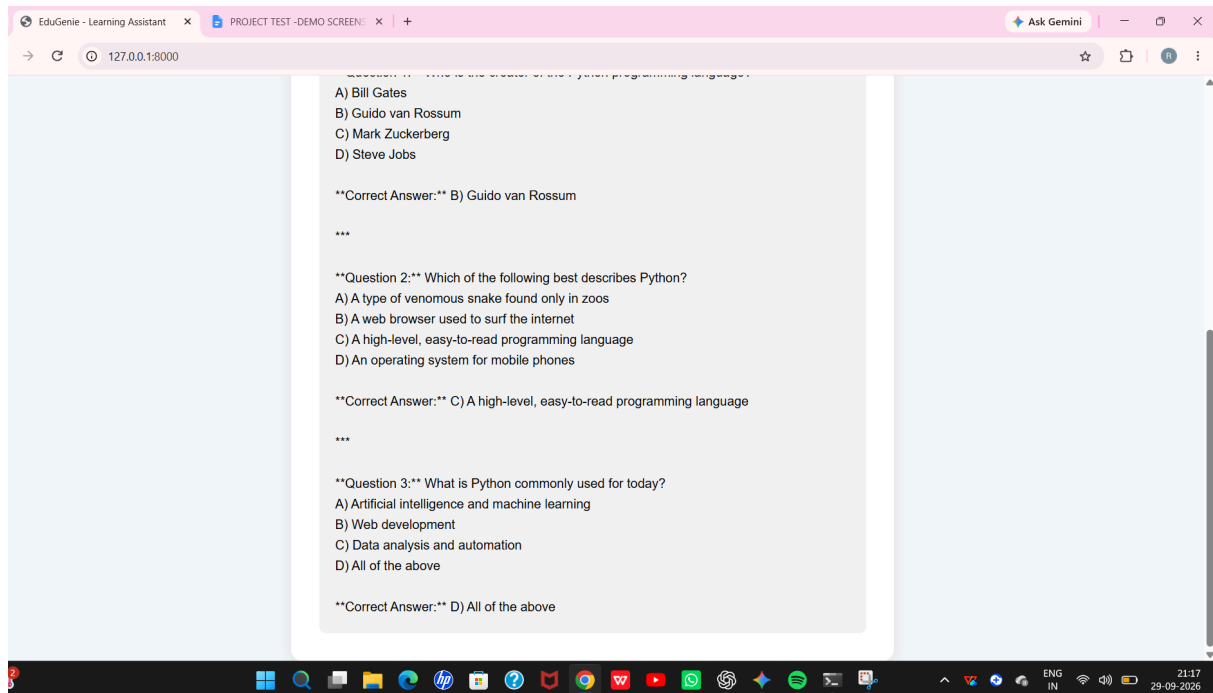

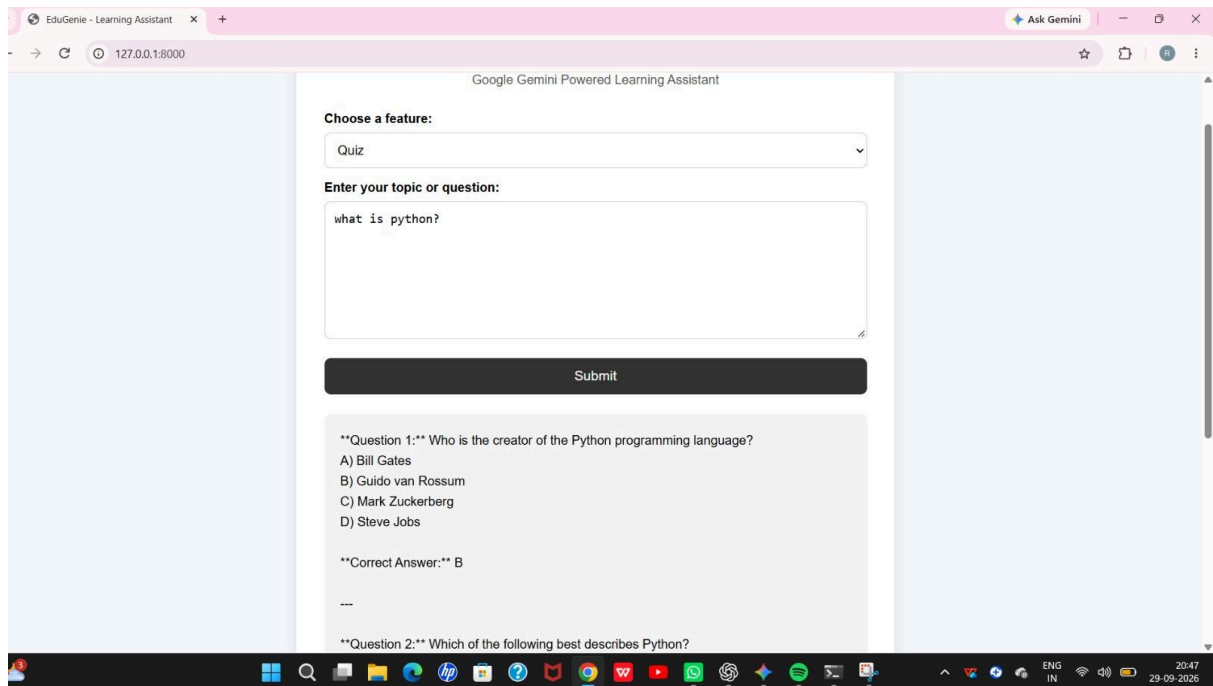

****It is versatile:**** People use Python for all kinds of things, such as:

- * Building websites and apps
- * Analyzing data and creating charts
- * Teaching computers to learn (Artificial Intelligence and Machine Learning)
- * Automating boring, repetitive tasks (like renaming hundreds of computer files at once)

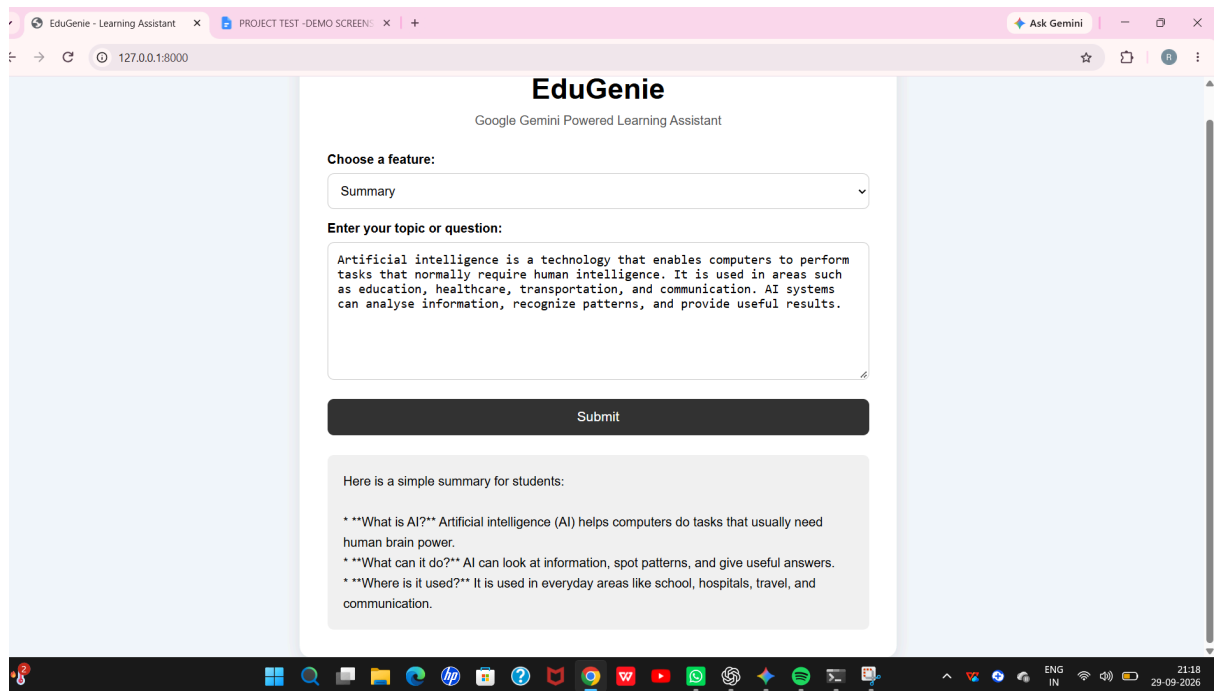

3. ****It has a huge library of "tools":**** Python comes with thousands of pre-written blocks of code made by other programmers. Instead of building something from scratch, you can use these tools to save time.

In short, Python is a powerful tool that lets humans talk to computers easily to build amazing things.

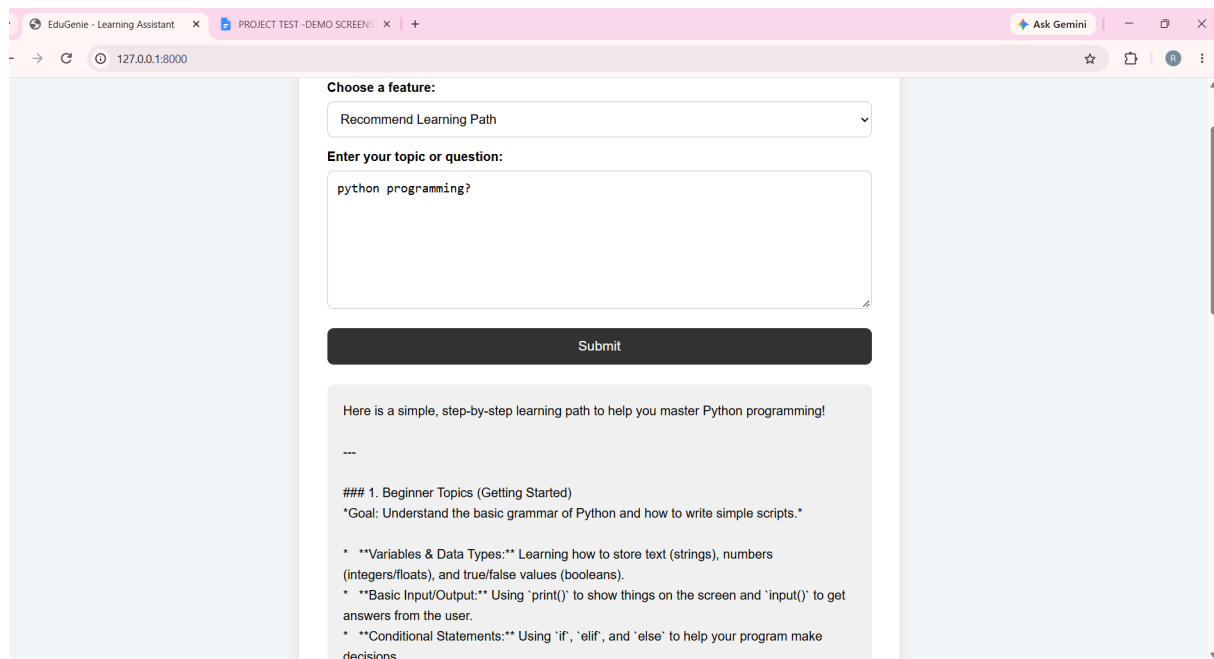

CREATING QUIZ FOR THE PROVIDED TOPIC :

CREATING SUMMARY FOR THE GIVEN PARAGRAPHS:

RECOMMENDATION FOR LEARNING PATH :

The screenshot shows a web browser window with two tabs: 'EduGenie - Learning Assistant' and 'PROJECT TEST - DEMO SCREEN'. The address bar shows '127.0.0.1:8000'. The page has a light blue background with a central white content area. At the top of the content area, there is a section titled 'Choose a feature:' with a dropdown menu currently showing 'Recommend Learning Path'. Below this is a section titled 'Enter your topic or question:' with a text input field containing 'python programming?'. A dark grey 'Submit' button is positioned below the input field. The response area below the button contains the following text:

Here is a simple, step-by-step learning path to help you master Python programming!

1. Beginner Topics (Getting Started)

Goal: Understand the basic grammar of Python and how to write simple scripts.

- * **Variables & Data Types:** Learning how to store text (strings), numbers (integers/floats), and true/false values (booleans).
- * **Basic Input/Output:** Using 'print()' to show things on the screen and 'input()' to get answers from the user.
- * **Conditional Statements:** Using 'if', 'elif', and 'else' to help your program make decisions.
